**Course 1002**

# Class 6

## Advanced Studies of the Human Aura

**El Morya**

# CosMos

*A Co-creator's Guide to the Whole-World*

*by*

**Ervin Laszlo and Jude Currivan**

# Chapter 12

**Breakdown or Breakthrough**

# Revering Nature

<http://i474.photobucket.com/albums/rr104/Nocturntable/Wiccan%20Do%20It/Goddessbow.jpg>

The Native American cultures, and past cultures, like the Vedruss culture that we have read about in the Anastasia series, revere Nature and perceive humanity as co-creators in a vast web of life. The Earth herself is seen and experienced as a living being to be honored and with whom to live in harmony.

*(p. 181)*

# El Morya (3-25-10) ASHA #4

**“Just as a child will always be emotionally and spiritually attached throughout its life to his mother, so we are all children of the Earth Mother upon whose body we live and move and have our being. To penetrate her secrets and to be able to transcend in consciousness to experience life in all of her wonderful manifestations requires entrée into her heart with great respect, care and sensitivity.”**

# Global Breakdown

**In our ignorance, we have viewed nature through the materialistic and mechanistic lens of a worldview that not only has allowed, but has actively encouraged us to “conquer” and “control” it in order to demonstrate our supposed superiority. Because of our misuse of Mother Earth, we are faced with a potential global breakdown.**

*(p. 196)*

# Climate change

The climate changes on our planet could be unpredictable, nonlinear, and catastrophic—with the more likely scenario being the progressively frequent extreme weather events that we are already experiencing in many parts of the world.  
*(p. 184)*

Climate change—  
especially its impact  
on water levels and ice  
sheets—affects the  
frequencies and scale  
of earthquakes,  
seafloor slides, and  
volcanic eruptions.  
*(p. 185)*

<http://i324.photobucket.com/albums/k326/Ermuleto/Volcan%20El%20Innombrable/volcan4.jpg>

# Extinctions

[http://i267.photobucket.com/albums/ii287/collin2008\\_photo/orangutan-pictures.jpg](http://i267.photobucket.com/albums/ii287/collin2008_photo/orangutan-pictures.jpg)

In 2006, a U.N. report stated that due to increasing population and development, humans are directly responsible for rates of extinctions of animals and plants a thousand times higher than historical rates. The report states, “In effect, we are currently responsible for the sixth major extinction event in the history of Earth, and the greatest since the dinosaurs disappeared, 65 million years ago.” (p. 186)

# Resource Depletion

We are running out of the Earth's mineral resources. The carbon-based reserves of Earth—primarily coal, oil, and natural gas—have taken hundreds of millions of years to accumulate, yet we have now depleted the reserves of oil and gas to what many energy analysts consider to be possibly less than half of their reserved amount. *(p. 187)*

<http://img.photobucket.com/albums/v445/ProgOwl/ScaryBooks/NJOilRefineriesCoffeeTableBook.jpg>

# Disease and Pollution

- **Huge increases in the use of chemical fertilizers and pesticides destroy the natural immunity of the ecosystem.**
- **Factory-farming involves enormous amounts of antibiotics that reduce the natural immunity and health of animals and humans.**
- **Our oceans, seas, rivers and lakes are heavily polluted and overfished to the extent that if current trends continue, the populations of all commercially fished species will collapse by 2050.**

# Disease and Pollution *Continued...*

- Carbon emissions worldwide have caused acid seawater that destroys oceanic ecosystems and kills coral reefs.
- Honeybee colonies have been dying. (*p. 190-191*)

[http://i859.photobucket.com/albums/ab151/J\\_Magill/bees.jpg](http://i859.photobucket.com/albums/ab151/J_Magill/bees.jpg)

# Soil Erosion

- A combination of deforestation, overgrazing, increased use of pesticides and reduction of biodiversity is creating dust bowls and dead zones on an unprecedented scale around the world. (p. 192)

*"Dust Bowl" by Alexandre Hogue*

# Global Breakthrough

**We can reconnect with Nature by:**

- **Spending more time outdoors**
- **Growing some of our own vegetables and eating more locally grown seasonal food**
- **Noting the phases of the moon**  
*(p. 193)*

# El Morya (4-9-10) ASHA #9

**“Working closely with nature and its subtle laws, cognized through greater solar awareness, allows the fullest flowering of each being’s glorious essence to manifest.**

**Communing with devic beings who have mastered the subtler sciences of life will improve your intuition and sensitivity to *all things bright and beautiful, all creatures great and small.*”**

<http://i0006.photobucket.com/albums/0006/findstuff22/Best%20Images/Just%20For%20Fun/Just%20for%20Fun%20Adjusted/BESTfairygreengltr.jpg>

# Global Breakthrough *Continued...*

The correlation between energetic resonance of the planet and biological organisms has led to the so-called planetary resonance hypothesis that the primeval components of life are vitalized through and attuned with the energetic harmonics of the Earth, Sun, and Moon. (p. 195)

# El Morya (4-15-10) ASHA #11

**Spirit is  
electromagnetic  
when contacting  
the auric fields of  
sentient life.  
It is the divine  
pulsation of God that  
exists everywhere  
and that draws all that  
is divine within the  
creation to itself by  
the law of attraction.**

[http://i335.photobucket.com/albums/m448/

# Chapter 13

## Completing the Shift

# First Waves of the Shift

<http://i380.photobucket.com/albums/oo246/Mariaki/earthlovepeace.jpg>

**We may have seen the first waves of the Shift in the climate of the 1960s, where peace, love, and justice seemed not only possible but realizable. While apparently dashed by the materiality of the 1970s and '80s, other waves arose, energizing a growing tide of change.**  
*(p. 198-199)*

# Growth in Awareness

**Constant reinforcement by media and Western governments of the search for instant gratification tries to keep people collectively immature. The reason is simple: When people behave like children, they are both eager consumers and politically docile. But these historical ploys are running out of steam and credibility. We are growing beyond their capacity to control our lives. (p. 199)**

<http://i779.photobucket.com/albums/yy74/fecundfreehand/illustration/picture25.jpg>

# Energizing the Shift

The Shift is now energized by a multitude of grassroots initiatives and movements whose:

- Thinking is nonhierarchical
- Compassion is inclusive
- Empowerment is distributed and cooperative rather than centralized and competitive  
*(p.199)*

# Co-creative Economics

A new measure called GPI (genuine progress indicator) combines material standards of living with other aspects of a healthy society and is a more effective measure of overall well-being than GDP (gross domestic product). *(p. 202)*

In Bhutan, one of the most remote yet peaceful places on earth, GNH, “gross national happiness” was introduced in the 1970s to act as a unifying guide for all the economic and social aspirations of the country.  
*(p. 203)*

# Co-creative commerce

Many businesses whose ways of operating are embodying sustainability principles are being founded around the world. They are more:

- “Organic” than organizational
- Flexible rather than rigid
- Empowering rather than controlling
- Nonhierarchical instead of authoritarian

*(p. 203)*

[http://img.photobucket.com/albums/v362/maebyn/illustration\\_contest/046\\_ForbiddenLove\\_Serenith.png](http://img.photobucket.com/albums/v362/maebyn/illustration_contest/046_ForbiddenLove_Serenith.png)

# Co-creative Design

**In the cycles and spirals of Nature's methods, there is no waste, everything is used, and in its use it becomes something else of value.**

*(p. 204)*

# Co-creative Technologies

The generation and use of solar, wind, tidal and geothermal energies can all be decentralized. *(p. 206)*

# Global Conversations

The more than one billion people who now access the Web are active participants in global conversations.

As more people think globally, they are coming to the following realizations about the roads to reconciliation and peace:

- The enemy is one's own self.
- Hatred injures the one hating more than the one hated.
- Forgiveness is possible.
- People *can* change. (p. 208-209)

# Chapter 14

## Our Cosmic Mission

# Our Mission

Accepting and embracing the opportunity to co-evolve with each other and the Cosmos calls for expanded awareness. It calls for completing the Shift that connects us with each other and with all of our integrally coherent world.  
*(p. 216)*

# El Morya (4-15-10) ASHA #11

**“When the men and women of today understand that their primary essence is Spirit and when they manifest mastery through utilizing its harmonious waves of peace to restore all to its natural state of balance and integrity, they will be able to perform all alchemical feats with great ease and joy because they will be living fully within the Eternal’s supreme faithfield of love-wisdom.”**

[http://i128.photobucket.com/albums/p164/cosmicfaery/Josephine%20Wall%20art/presence\\_of\\_gaia.jpg](http://i128.photobucket.com/albums/p164/cosmicfaery/Josephine%20Wall%20art/presence_of_gaia.jpg)

# Conscious Coherence

<http://i185.photobucket.com/albums/x205/lcvalleycp/Dolphin%20%20Sealife%20Art/48c3.jpg>

**A consciously coherent person is “in tune” with the world. Around such a person, groups of coherence form and grow and spread. The time comes, when a critical mass of humans regains its embracing coherence and achieves interconnection. The coherence spreads irreversibly and instantly throughout humankind, spreading from the human**

**family to the biosphere of the Earth, from there to the galaxy and the Cosmos. And so, as we achieve this next step in our evolution, we become ever more conscious co-creators and take a giant leap toward fulfilling the mission of humanity on Earth and within the Cosmos. (p. 216)**

# El Morya (4-15-10) ASHA #11

“Electromagnetic faithfields may be increased by a kinetic factor that is the square of the sum of the number of those who are outpouring their devotions together in any joyful and intentional service to the light. Although creating a more powerful grid for the conveyance of spiritual energies to bless humanity may increase by geometric proportions by increased numbers, it is also dependent upon the specific frequencies of each member. A few adepts or arhats can generate as much spiritual light-energy as hundreds, thousands or even millions of aspirants who have yet to attain their Christhood or Buddhahood. Thus, cosmic faithfields may be established that can sustain the spiritual protection of entire planets by beings like Sanat Kumara or Gautama Buddha who have developed their auric fields over millennia to feed vast evolutions of lifewaves.”

**“The aura of the sun  
is our ideal example.  
Share how the solar sciences  
have benefited you  
on your path.”**
